What is MS Power Point ?

MS PowerPoint is a program that is included in the Microsoft Office suite. It is used to make presentations for personal and professional purposes.

- The program was created in a software company named Forethought, Inc. by Robert Gaskins and Dennis Austin.
- It was released on April 20, 1987, and after 3 months of its creation, it was acquired by Microsoft.
- The first version of this program, when introduced by Microsoft was MS PowerPoint 2.0 (1990).
- It is a presentation-based program that uses graphics, videos, etc. to make a presentation more interactive and interesting.
- The file extension of a saved Power point presentation is ".ppt".
- A PowerPoint presentation comprising slides and other features is also known as PPT.

Insert Different Object in Power point :-

1) Image
2) Word arts
3) Audio
4) Video

1) Image :-

Insert a picture from your computer on your slide

1. Click where you want to insert the picture on the slide.
2. On the **Insert** tab, in the **Images** group, click **Pictures** and then click **This Device**.
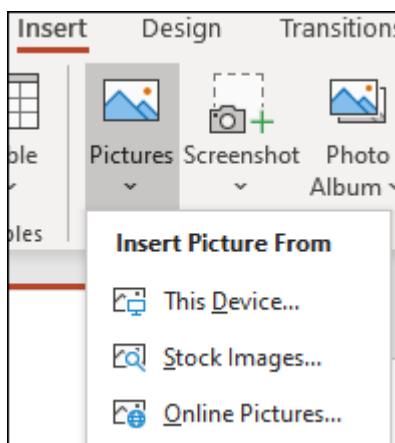

3. In the dialog box that opens, browse to the picture that you want to insert, click that picture, and then click **Insert**.

Insert stock images on your slide

1. Click where you want to insert the picture on the slide.
2. On the **Insert** tab, in the **Images** group, click **Pictures** and then click **Stock Images**.
3. Type in what image you're looking for, then click on which images you want and click **Insert**.

Insert a picture from the web on your slide

1. Click where you want to insert the picture on the slide.
2. On the **Insert** tab, in the **Images** group, click **Pictures** and then click **Online Pictures**.
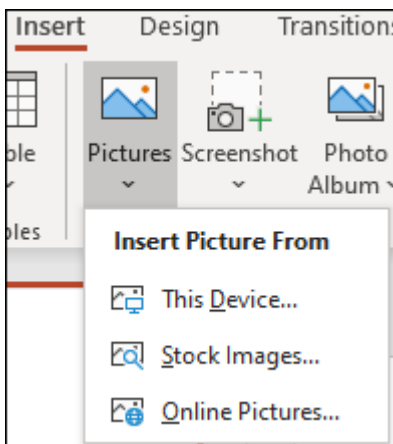

1. In the search box type in the image you're looking for and press enter.
2. Select all the images you want and then click **Insert**.

2) Word arts :-

1. Select a text box, or select some text inside of the text box.

2. On the **Format** tab, click the **More** drop-down arrow in the **WordArt Styles** group.

3. A drop-down menu of WordArt Styles will appear. Select the **style** you want to use.

4. The text will appear in the selected style. If desired, you can change the font or font color from the **Home** tab.

To add or modify text effects:

1. Select a text box, or select some text inside of the text box. The **Format** tab will appear.

2. On the **Format** tab, click the **Text Effects** command in the **WordArt Styles** group.

3. A drop-down menu will appear showing the different effect categories. Hover the mouse over an effect category, then select the desired **effect** from the menu that appears.

4. The effect will be applied to your text. If you want, you can combine several different effects.

In the WordArt Styles group, you can also use the **Text Fill** and **Text Outline** drop-down boxes to modify the **fill** and **outline** color.

3) Audio :-

1. From the **Insert** tab, click the **Audio** drop-down arrow, then select **Audio on My PC**.

2. Locate and select the desired audio file, then click **Insert**.
3. The audio file will be added to the slide.

Recording your own audio

Sometimes you may want to **record** audio directly into a presentation. For example, you might want the presentation to include **narration**. Before you begin, make sure you have a **microphone** that is compatible with your computer; many computers have **built-in microphones** or ones that can be **plugged in** to the computer.

To record audio:

1. From the **Insert** tab, click the **Audio** drop-down arrow, then select **Record Audio**.
2. Type a **name** for the audio recording if you want.
3. Click the **Record** button to start recording.
4. When you're finished recording, click the **Stop** button.

5. To preview your recording, click the **Play** button.

6. When you're done, click **OK**. The audio file will be inserted into the slide.

Working with audio

To preview an audio file:

1. Click an audio file to select it.

2. Click the **Play/Pause** button below the audio file. The sound will begin playing, and the **timeline** next to the Play/Pause button will advance.

3. To jump to a different part of the file, click anywhere on the **timeline**.

To move an audio file:

- Click and drag to **move** an audio file to a new location on a slide.

To delete an audio file:

- Select the audio file you want to delete, then press the **Backspace** or **Delete** key on your keyboard.
4) Video :-

1. From the **Insert** tab, click the **Video** drop-down arrow, then select **Video on My PC**...

2. Locate and select the desired video file, then click **Insert**.

3. The video will be added to the slide.

With the Screen Recording feature on the Insert tab, you can create a video of anything you are doing on your computer and insert it into a slide.

To insert an online video:

Some websites—like YouTube—allow you to **embed** videos into your slides. An embedded video will still be hosted on its original website, meaning the video itself won't be added to your file. Embedding can be a convenient way to reduce the file size of your presentation, but you'll also need to be connected to the Internet for the video to play.
Working with videos

To preview a video:

1. Click a video to select it.

2. Click the **Play/Pause** button below the video. The video will begin playing, and the **timeline** next to the Play/Pause button will advance.

3. To jump to a different part of the video, click anywhere on the **timeline**.

To resize a video:

- Click and drag the **corner sizing handles** until the video is the desired size.

The corner sizing handles will resize a video while preserving its **original aspect ratio**. If you use the side sizing handles, the video will become **distorted**.

To move a video:

- Click and drag to **move** a video to a new location on a slide.

To delete a video:

- Select the video you want to delete, then press the **Backspace** or **Delete** key on your keyboard.
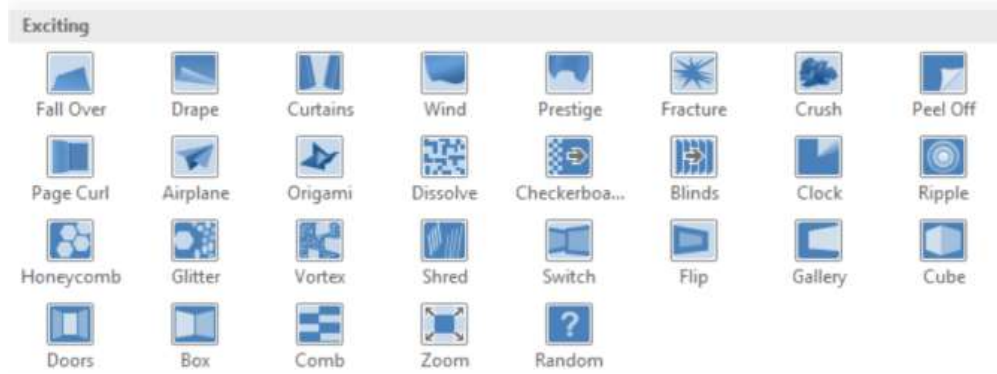

About transitions

There are **three categories** of unique transitions to choose from, all of which can be found on the **Transitions** tab.

Subtle: These are the most basic types of transitions. They use **simple animations** to move between slides.

Exciting: These use more **complex animations** to transition between slides. While they're more visually interesting than **Subtle** transitions, adding too many can make your presentation look less professional. However, when used in moderation they can add a nice touch between important slides.

Dynamic Content: If you're transitioning between two slides that use similar **slide layouts**, dynamic transitions will move only the **placeholders**, not the slides themselves. When used correctly, dynamic transitions can help **unify** your slides and add a further level of polish to your presentation.
